

Open Information Extraction

- The dependency path between *Pitt* and *Thelma and Louise* is $nsubj \uparrow obl \downarrow nmod \downarrow appos$

- This is an indirect syntactic relation
 - It would be useful to have a representation that directly encodes the **semantic** relations between the participants

Semantic Role Labeling (SRL)

- The task of *Semantic Role Labeling* aims to represent a sentence in terms of its events or propositions
- Events consist of a main relation, participants and secondary relations

battle
wrestle
join
debate
consult

Also others relation words,
such as 'meeting', 'summit'
etc.

meet(Somebody1, Somebody2)

When Powell met Zhu Rongji on Thursday they discussed the return of the spy plane.

meet(Powell, Zhu) discuss([Powell, Zhu], return(X, plane))

FrameNet

- Organized by *frames*: a schematized event type
- A frame is invoked by frame elements, generally words or morphemes
 - They constitute the anchor of the scene and determine what it is about
- Semantic roles are defined per frames
- Example:
 - The *Judgment* frame
 - Frame elements: *admire, appreciate, value...*
